

Engineering Club takes 1st place

TCC's engineering club took a wild ride and captured first place in the ASEE Model Design Competition this summer. The team's cool red car, under construction for six months, hit the track in Salt Lake City in June. Students designed the battery-powered vehicle to navigate a difficult figure-eight track, complete with hills and valleys, all without the assistance of a remote control.

Steve Work, team captain (below) drove the car well, posting impressive times. While eight teams from around the nation registered for the competition, only four teams developed a vehicle worthy of the ride. TCC team members for this year's competition were Alton Davis, Keith Owen, Brandon Simpkins, Steve Work and faculty advisors Steve Ezzell and Paul Gordy. 🌐
