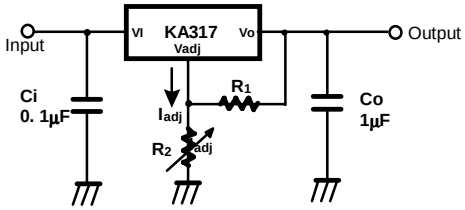
Typical Application



$$V_O = 1.25V\ (1 + R_2/R_1) + I_{adj} R_2$$

Figure 5. Programmable Regulator

C_i is required when regulator is located an appreciable distance from power supply filter.
C_o is not needed for stability, however, it does improve transient response.
Since I_{ADJ} is controlled to less than 100μA, the error associated with this term is negligible in most applications.
